ACKNOWLEDGEMENT

An endeavour over a long period can be successful only with the advice and supports of many well-wishers. We take this opportunity to express our gratitude and appreciation to all of them.

We are extremely thankful to our beloved Managing Director **Dr. K CHANDRA OBUL REDDY GARU** who took keen interest and encouraged us in every effort throughout this course.

We wish to express our deepest sense of gratitude and pay our sincere thanks to our guide **Mr. K. Lokeswar Reddy** Department of Computer Science and Engineering, K.S.R.M. College of Engineering (A), Kadapa for his valuable guidance and suggestions in analysing and testing throughout the period, till the end of project work completion and his timely suggestions and help. We are very much thankful to **Mr. A. Ramaprakash Reddy M.Tech., (Ph.d)** Head of the Department for Computer Science and Engineering, K.S.R.M. College of Engineering (A), Kadapa for providing good facilities & congenial atmosphere in our college. we take this opportunity to express our deep gratitude and appreciation to all those who encouraged us for successfully completion of this Project work.

We wish to express our sincere to gratitude to **Dr. T NAGESWARA PRASAD, M.Tech., Ph.D.** Vice Principal of K.S.R.M. College of Engineering(A), Kadapa and **Dr. V.S.S. MURTHY, M.Tech., Ph.D.** Principal of K.S.R.M. College of Engineering(A), Kadapa and for their consistent help and encouragement to complete the project work.

We also thankful to all teaching and non-teaching staff of the **Department of Computer Science and Engineering** for their support throughout our B.Tech. course. we express our heartfelt thanks to **My Parents** for their valuable support and encouragement in completion of my course, also I express my heartfelt regards to my Friends for being supportive in completion of my project.

Project Associates

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

VISION & MISSION

VISION:

To evolve as a recognized center of excellence in the area of Computer Science and Engineering
and other related inter-disciplinary fields.

MISSION:

- M1:** To produce competent and industry ready professionals through well balanced curriculum and innovative pedagogy.
- M2:** To provide conducive environment for research by establishing centre of excellence and industry collaborations.
- M3:** To instill leadership qualities, ethical values among students through various co-curricular and extracurricular activities.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

PROGRAMME OUTCOMES

PO1 - Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 - Problem Analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 - Design/Development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 - Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 - Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6 - The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7 - Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8 - Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice.

PO9 - Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10 - Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11 - Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12 - Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING
PROGRAMME SPECIFIC OUTCOMES

PSOs are statements that describe what the graduates of a specific engineering program should be able to do:

PSO1 - Professional Skills: The ability to understand, analyze and develop computer programs in the areas related to algorithms, system software, multimedia, web design, big data analytics, and networking for efficient design of computer-based systems of varying complexity.

PSO2 - Problem-Solving Skills: The ability to apply standard practices and strategies in software project development using open-ended programming environments to deliver a quality product for business success.

PSO3 - Successful Career and Entrepreneurship: The ability to employ modern computer languages, environments, and platforms in creating innovative career paths to be an entrepreneur, and a zest for higher studies.

Project Title

College Event Registration Portal

Abstract

The College Event Registration Portal is a web-based application developed to manage college events and online registrations easily. The system allows students to view event details, check schedules, and register for technical, non-technical, and sports events through an online platform. The project is developed using HTML, CSS, and JavaScript. It provides a simple, responsive, and user-friendly interface that works on both computers and mobile devices. The application reduces manual paperwork and helps organizers manage participant information efficiently. The portal includes features such as event categorization, online registration forms, schedule display, and responsive navigation. It improves communication between students and event organizers by providing all event-related information in a single platform. The system also supports easy access to event details and simplifies the registration process. The application is lightweight, easy to use, and suitable for college-level event management. Overall, the project provides an easy, organized, and effective solution for digital event management in colleges while demonstrating practical front-end web development concepts.

Introduction

The College Event Registration Portal is a modern web-based application developed to simplify and digitize the process of managing college events and student registrations. In many educational institutions, event management is often handled manually through paper notices, spreadsheets, and offline registration forms, which can be time-consuming and difficult to maintain. This project was developed to overcome these limitations by providing a centralized online platform where students can easily access event-related information and register for events digitally.

The main objective of the project is to provide a simple, efficient, and user-friendly system for organizing college events. The portal allows students to view details of technical, non-technical, and sports events, check schedules, and complete registrations through an online interface. This reduces manual paperwork and improves communication between organizers and participants.

The application is developed using HTML, CSS, and JavaScript technologies. HTML is used to create the structure of the webpages, CSS is used for styling and responsive design, and JavaScript is used to add interactivity and dynamic functionalities. The system provides a responsive interface that works smoothly on desktops, laptops, tablets, and mobile devices.

The portal includes important features such as event categorization, online registration forms, responsive navigation, and schedule management. It also supports local storage for storing registration information temporarily within the browser. The simple and lightweight design makes the application easy to use and suitable for academic purposes.

This project demonstrates practical implementation of front-end web development concepts including responsive design, form handling, dynamic content management, and user-friendly interface development. Overall, the College Event Registration Portal provides an organized and effective solution for digital event management in colleges.

Problem Statement

In many colleges, event management and student registrations are still handled manually using paper forms, spreadsheets, and offline communication methods. This process is time-consuming, difficult to manage, and increases the chances of errors in maintaining participant records.

Students often face difficulty in accessing event information, schedules, and registration details in a single platform. Organizers also find it challenging to manage registrations, update schedules, and maintain participant data efficiently.

To overcome these issues, the College Event Registration Portal is developed as a web-based solution that provides centralized event management, online registration, and easy access to event-related information through a simple and user-friendly interface.

Objectives

- To develop a web-based platform for managing college events.
- To provide online event registration for students.
- To reduce manual paperwork and registration complexity.
- To provide easy access to event details and schedules.
- To create a responsive and user-friendly interface.
- To improve communication between organizers and participants.
- To manage participant information efficiently.
- To demonstrate practical front-end web development concepts using HTML, CSS, and JavaScript.

Modules Description

Module 1 – Home Module

The Home Module serves as the main page of the application. It provides basic information about the event portal, announcements, and navigation links to different sections of the website.

Module 2 – Events Module

The Events Module displays information about various technical, non-technical, and sports events. Students can view event details, categories, and participation information.

Module 3 – Schedule Module

The Schedule Module helps users view event dates, timings, and schedules in an organized manner. It allows students to easily track upcoming events and activities.

Module 4 – Registration Module

The Registration Module allows students to register for events through online forms. The system collects participant details and stores the registration information using browser local storage.

Technologies Used:

Technology	Purpose
HTML5	Used to create the structure and content of the webpages
CSS3	Used for styling, layouts, and responsive web design
JavaScript	Used to add interactivity and dynamic functionalities
Local storage	Used to store registration data temporarily in the browser
Visual Studio Code	Used as the source code editor
Web Browser	Used for running and testing the application
Vercel	Used for deploying and hosting the website

Testing

Testing is an important phase in software development used to verify whether the application works correctly according to the project requirements. The College Event Registration Portal was tested to ensure proper functionality, responsiveness, and smooth user interaction.

Types of Testing

Unit Testing

Individual modules such as the Home page, Events section, Schedule page, and Registration form were tested separately.

Integration Testing

The interaction between different modules and registration data handling using local storage was tested successfully.

System Testing

The complete application was tested as a whole system to verify proper navigation, event display, and registration functionality.

User Interface Testing

The user interface was tested for responsive design, layout alignment, and mobile compatibility.

Browser Compatibility Testing

The application was tested on different browsers including Google Chrome, Mozilla Firefox, and Microsoft Edge.

Test Cases

Test Case	Expected Result	Status
Open Home Page	Homepage loads successfully	Passed
View Events	Event details displayed properly	Passed
Check Schedule	Schedule information displayed correctly	Passed
Submit Registration Form	Registration completed successfully	Passed

Test Case	Expected Result	Status
Responsive Mobile View	Mobile layout displayed correctly	Passed
Refresh Browser	Saved data remains available	Passed

Advantages of the Project:

- Reduces manual paperwork and registration complexity.
- Provides a centralized platform for managing college events.
- Easy access to event details and schedules.
- Supports online event registration for students.
- User-friendly and responsive interface.
- Works on both computers and mobile devices.
- Improves communication between organizers and participants.
- Helps in efficient participant data management.
- Lightweight and easy to maintain.
- Saves time for both students and organizers.
- Demonstrates practical front-end web development concepts.

Conclusion:

The College Event Registration Portal was successfully developed as a web-based application to simplify and digitize college event management and online registrations. The system provides a centralized platform where students can view event details, check schedules, and register for technical, non-technical, and sports events easily.

The project was developed using HTML, CSS, and JavaScript technologies with a responsive and user-friendly interface. The application reduces manual paperwork, improves accessibility, and helps organizers manage participant information efficiently.

Overall, the project provides a simple, organized, and effective solution for digital event management while demonstrating practical front-end web development concepts.

Future Enhancements:

- Integration of database systems such as MySQL or MongoDB.
- Implementation of user login and authentication system.
- Development of admin dashboard for event management.
- Online payment gateway integration.
- Email and SMS notification features.
- Cloud-based deployment for wider accessibility.
- QR code generation for participant verification.
- Certificate generation for participants.
- Real-time event updates and announcements.
